The »4-in-1« minilab! MSC 101.d

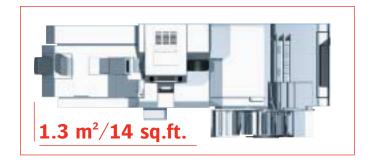

Compact, automatic, versatile — the all-rounder MSC 101.d.

How valuable is space for your business?

With its compact 1.3 m² (14 sq.ft.) footprint and user-friendly operation, the MSC 101.d is the perfect solution for boosting your profitability — today and in the future. Utilise your valuable floor space with a promising business solution that offers a substantial profit potential.

What makes a first-run print rate so special?

Agfa TFS (Total Film Scanning) technology delivers an exceptional first-run print rate, which means excellent print quality is automatic! With less paper waste and true walk-away printing.

A complete business solution - all in one unit?

The MSC 101.d "Film on CD" package is an "Enhanced 4-in-1" business solution of the future – ideal for people who want film processing, scanning, printing, and digital services all in one unit – now with CD-burning!

The versatility of the MSC 101.d lets you respond directly to your customers' needs. Analog and digital print orders are processed conveniently. The result is a variety of outstanding print products — and it's all automatic!

Explore the digital capabilities of the MSC 101.d.

With the MSC 101.d, you are ready to meet today's challenges and the growing demands of a rapidly changing digital world.

The Agfa FIT system combines the advantages of both analog and digital technologies into one unit. This makes it possible to process analog media like 35 mm film and digital image files from any source and print them on high-quality photographic paper.

A whole new dimension of digital input options is at your fingertips. Working in combination with the Agfa e-box digital order station you have a complete production line for digital workflow in addition to your analog workflow. This combination provides high-quality prints from digital data sources and fast processing of digital print orders.

Agfa TFS delivers outstanding print quality. It also gives you more time to serve your customers.

This pays off as it not only improves customer satisfaction, it keeps them coming back for repeat business and helps secure your future profits.

Agfa TFS helps secure your future profits!

Fit for the future.

Film processor, printer (analog and digital), and paper processor are all combined into one unit (4-in-1). This advanced technology takes up only 1.3 m² (14 sq.ft.) of space.

In addition to the proven analog print system, the MSC 101.d offers a fully-integrated FIT system capable of printing digital images from virtually any source on high-quality photographic paper.

Along with the image processor and camera kit, the FIT system includes two lenses with integrated high-resolution LCDs. This makes it possible to print standard formats from digital image data or enlargements up to $8" \times 10"$. FIT 4" is used to print up to $12 \text{ cm} \times 15 \text{ cm} (4" \times 6")$ images. FIT 8" is designed for $20 \text{ cm} \times 25 \text{ cm} (8" \times 10")$ enlargements. The individual application depends on the preferred level of throughput and print quality.

All standard film types (135, IX240, 110, 120, and 220) can be processed on the MSC 101.d. The different image formats (standard, panorama) are printed in the same print run just like the index print — automatically.

Convenience at the touch of a button.

From film processing to the final print. Initial orders from 135 film are processed automatically. The end of the film is simply attached to the leader card, placed into the film cassette, and inserted into the MSC 101.d. Everything else is done automatically.

Processing re-orders on the printer while initial orders are being developed in the film processor is as easy as pressing a button. Changing paper sizes in analog or digital print modes is just as easy. Four different print sizes are available instantly thanks to the integrated Twin Cassette system. An on-screen paper consumption indicator simplifies everyday operations.

The paper is cut from a roll before being exposed. This greatly minimises paper waste.

Analog and digital modes offer priority management and batch processing.

Operation is extremely easy thanks to on-screen dialogue, plain text displays, and intuitive keypad layout. A clearly identifiable key at the side of the screen is assigned for main menu functions. This helps new operators learn to process standard and special orders quickly and reduces training time to a minimum. An integrated on-screen help function guides operators through special request procedures.

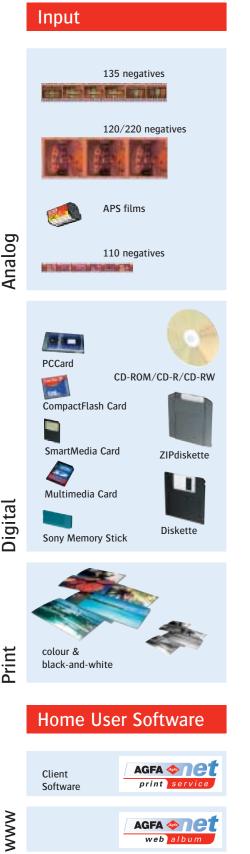

Additional helpful features:

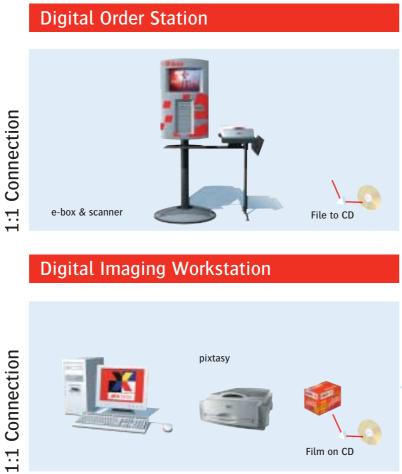

- Timer
- Automatic System Calibration (ASC) with integrated test negative, densitometer, and paper calibration management
- Automatic water evaporation balance
- Backprint options
- Integrated meters for accurate consumption control

These features combined with the proven Agfa TFS technology ensure excellent print quality automatically.
